Call

< 2020 – 2021 BiodivRestore

Duration

01.03.2022 - 31.03.2025

Total Grant

€ 1,246,023

Funders

The Research Foundation – Flanders (FWO), Belgium Academy of Finland (AKA), Finland VDI/VDE-IT, Germany National Science Center (NCN), Poland Fundação para a Ciência e Tecnologia (FCT), Portugal

What is a Nature-Based Solutions?

Solutions that are inspired and supported by nature, which are cost-effective, **simultaneously provide environmental, social and economic benefits** and help build resilience

Nature-based Solutions are actions addressing key societal challenges through the protection, sustainable management and restoration of both natural and modified ecosystems, **benefiting both biodiversity and human well-being**

International Union for Conservation of Nature

Nature-Based Solutions should be alternatives to technical solutions (Technology-Based Solutions)

Blue-green (sometimes blue-green-grey) infrastructure instead of grey infractructure

Nature-Based Solutions have to provide ecosystem services

Examples of ecosystem services that can be achieved with NBS

- water retention (drought and flood mitigation)
- nutrient retention
- recreation
- Air and water purification
- temperature reduction (cooling effect)
- providing near-natural habitats
- increase in biodiversity
- landscape enrichment

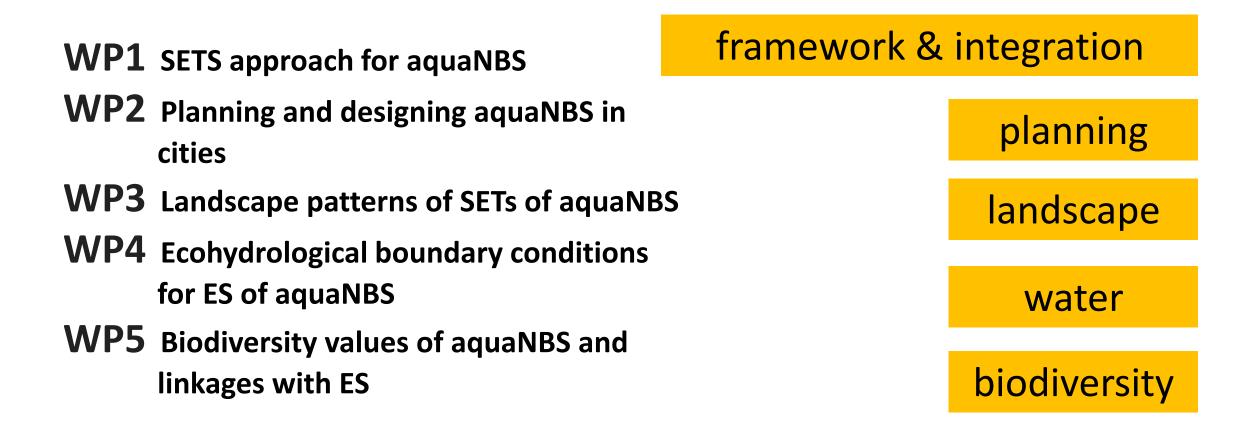

Main research questions

- How are biodiversity and ES of aquaNBS mediated by social, ecological, and technological factors?
- Does this vary among cities in different regions of Europe?
- How does biodiversity influence the regulating ES provided by aquaNBS?
- How can urban planning effectively design, manage, and monitor the biodiversity and regulating ES of aquaNBS?

Spatial scales and geographical representation of the BiNatUr

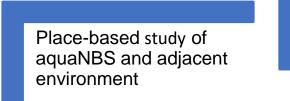

Spatial scales and geographical representation of the BiNatUr

- **WP1** SETS approach for aquaNBS
- WP2 Planning and designing aquaNBS in cities
- **WP3** Landscape patterns of SETs of aquaNBS
- WP4 Ecohydrological boundary conditions for ES of aquaNBS
- WP5 Biodiversity values of aquaNBS and linkages with ES

Spatial scales and geographical representation of the BiNatUr

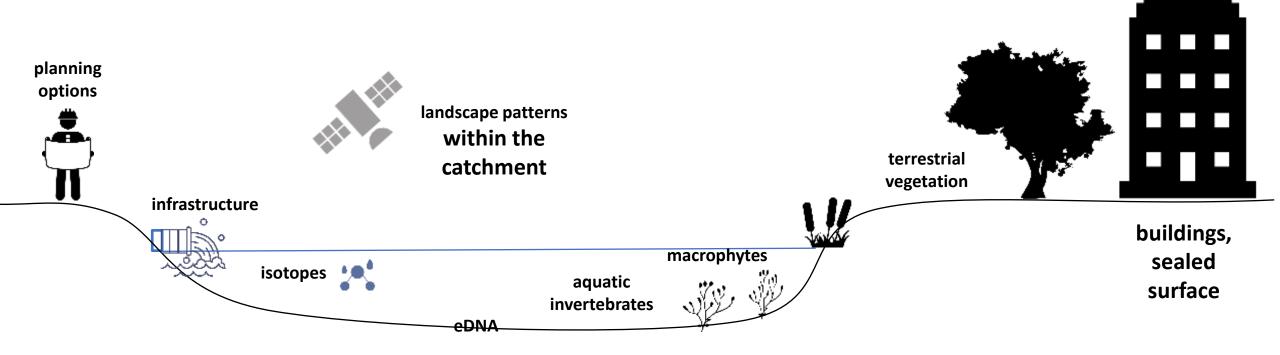

City-level holistic approach through different SET factor constellations in cities

Regional representativeness of different climate regimes in Europe

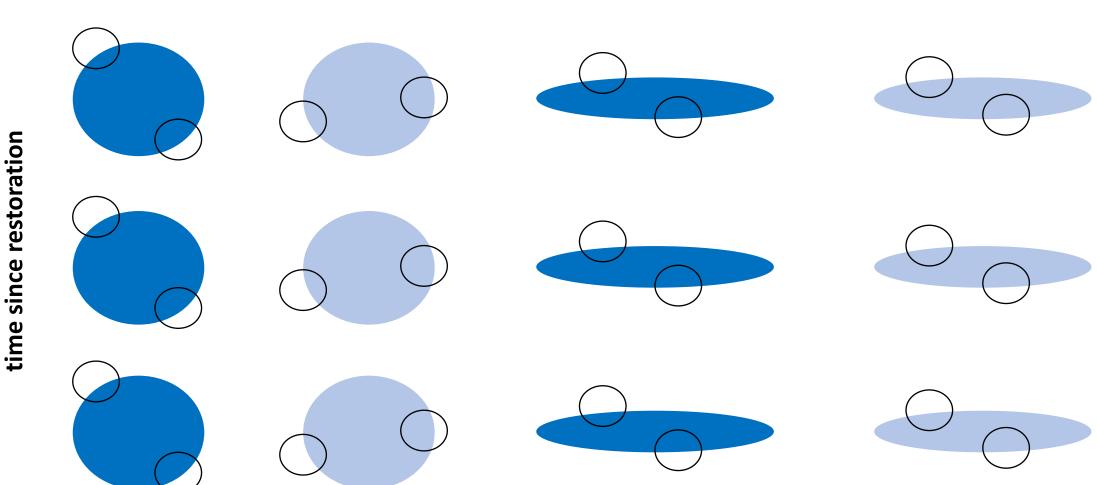

Research questions for BiNatUr research

Social	Ecological	Technological							
How is BD valued among planners and practitioners? What is the role of biodiversity in planning NBS? How it can be enhanced?	What is biodiversity in aquaNBS? Are there linkages between BD and ESs? How does surrounding vegetation influence BD and ESs of aguaNBS?	How ESs and BD of aquaNBS are affected by local infrastructure and surrounding land-uses? How technology used in NBS influence BD and ESs?							
Key social components for aquaNBS (WP1), expert interviews (WP2), document analyses (WP2), workshops and meetings (WP2)	Key ecological components for aquaNBS (WP1), GIS database and Remote Sensing (WP3), water isotope and eDNA sampling (WP4), sampling of vegetation, macrophytes, macroinvertebrates (WP5), habitat monitoring (WP5), landscape analyses (WP3)	Key technological components for aquaNBS (WP1), expert interviews (WP2), document analysis (WP2), GIS database and Remote Sensing (WP3), habitat monitoring (WP5)							

12 study sites per city
